

1. Choosing the Right Cities – Our Evaluation Framework

Key Takeaway: Considering rationale, viability, and risk-opportunity analysis, the framework narrows down to **Trends**, **Purchasing Criteria**, **Operational Feasibility**, and **Risks** and **Opportunities**.

2. Evaluating Key Locations to Identify Top 3 Expansion Sites

- Based on the key factors defined in Slide 1, we identified **five** potential expansion locations in Poland — each evaluated by its unique strengths and limitations to determine the final top three.

 Gdańsk	 Szczecin	 Kraków	Łódź	Lublin
+ Logistics hub: Near Port of Gdańsk + major roads - EV infra: #2 in PL for public chargers - Talent pool: Gdańsk Univ. of Tech + voc. Training ecosystem - Real estate: Retail/logistics space available (Colliers, AXI IMMO) Clean energy: 63 MW waste-to-energy plant aligns with brand Pop-up store: Local ops & network already active - Moderate purchasing power (<23k €)	+ Port hub: Key import/export gateway Closest to Berlin: Fastest Giga supply route Talent base: Backed by West Pomeranian Univ. of Tech Dual ports: Faster delivery + supply chain resilience Regional reach: Covers north Poland + neighbors - Canibalization risk: Proximity to (potential) Gdańsk Center Higher OPEX: Dual ports may raise costs without sales lift	+ High spending power: ~€32k GDP/capita (PPP) Big market: 804k pop, 2nd in PL Top talent: AGH (leading tech uni) Logistics reach: Kraków Airport hub EV infra: 226 chargers, #4 in PL (Jun '24) Green goals: EU net-zero by 2030 - Tough competition: for example Volvo EV tech hub present Canibalization risk: Katowice ~75 min away High costs: Expensive real estate + labor	+ Central logistics: Near A1/A2 motorways Skilled workforce: HARMAN (Samsung subsidiary), Polmo Łódź automotive manufacturing legacy, tech schools Real estate: Ample showroom/warehouse space (as per AXI, IMMO) Large market: 670K pop, 3rd largest city in Poland - Charger gaps: AHP-GIS flags low-suitability zones Canibalization risk: Near Warsaw, Katowice, Poznań centers Low spending power: ~€7.2k per capita	+ Medium spending power: ~€9–10K per capita Decent market: 9th largest PL city Talent source: Lublin Univ. of Tech = engineering pipeline Green push: “Green Budget” targets –23% GHG, –9.5% energy Location near Warsaw = spill-over demand Eastern coverage: Expands reach - Weaker demand: East has lower BEV uptake vs. major metros ROI risk: High setup cost may not match sales potential Opportunity cost: Could miss higher-demand areas (e.g., Kraków)

Key Takeaway: After weighing the strengths and limitations of all five locations, **Gdańsk**, **Szczecin**, and **Kraków** emerge as the most strategically sound choices for Tesla Center expansion.
